Subject: Updated Guidance for Infringement Database

UKOPA/06/0048

Phill,

At the last UKOPA meeting that it was agreed that the infringement database be updated to include the opportunity to record (a) the method by which the operator becomes aware of an infringement and (b) the nature of the pipeline routing at the location of an infringement. As a result, I took an action to update the database guidance to this effect and circulate for comments prior to adoption.

Therefore, please will you circulate this note and the attached update to guidance and request members to direct any feedback to me or any other member of the Infringement Working Group.

Thanks
Mark
