## Process Safety Leadership Group

# Raising the profile of process safety leadership – taking the next step

Building on the HSE *Leading From the top* conference held in April 2008, the Process Safety Leadership Group (PSLG) is hosting a UK event for onshore major hazard companies to share approaches to process safety leadership and to identify where improved leadership and process safety management is needed. The event will be used to develop a clear view on the top team responsibilities and explore practical tools to help senior managers take effective account of process safety risks in business management. De-mystifying process safety management and establishing some clear, simple methods for improving leadership will be a key part of the day.

### **Who should attend?**

Directors, Senior Executives and Senior Country Managers of UK onshore major hazard companies. If you are a key decision maker and have a clear leadership role within a major hazard company you will benefit from attendance.

### **What will be covered?**

- How do you identify process safety risks in your business?
- How are these risks managed?
- What is the role of the top team in managing them?

The forum will present views from the top from senior managers in major hazard industries to stimulate discussion and share good practice.

### **How to reserve a place:**

The event is free of charge - sponsored jointly by HSE, UKPIA, TSA, CIA and Unite the Union.
